User Manual

The following manual is intended to provide instruction and support for the use of Venn Diagram software. It includes instructions to setup/edit Venn Diagrams and also some possible errors/issues you may encounter.

Getting Started

1. Once application is launched, begin by selecting the number of circles the diagram will have.
2. A new window will appear with your new diagram. You may now add titles and labels to your diagram.
3. You may also notice an options window where you can customize the look of your diagrams and add information.
4. To add information, enter the word or sentence into the textbox and check the location it should appear in on the diagram, then press add.
5. To save diagram, press the save button in the options panel. This will save your diagram as a .txt file, do not alter this file.
6. To load diagrams, click the load button in the first window, and browse until you find the diagram you're looking for.

Common Features

- Text boxes for titles and user dependent input fields
- Submit buttons for each user field to convert the text inputted into a string object which can then be placed in the venn diagram

Common Errors

1) User Input Errors

      If a specified field is asking for a certain type of input (e.g. String input without numbers) and the user does not follow input parameters, the program is bound to output a possible error.
